General Description

The Cypress CYBLE-222005-00 is a fully certified and qualified module supporting Bluetooth® Low Energy (BLE) wireless communication. The CYBLE-222005-00 is a turnkey solution and includes onboard crystal oscillators, chip antenna, passive components, and Cypress PSoC 4 BLE. Refer to the PSoC 4 BLE datasheet for additional details on the capabilities of the PSoC 4 BLE device used on this module.

The CYBLE-222005-00 supports a number of peripheral functions (ADC, timers, counters, PWM) and serial communication protocols (I²C, UART, SPI) through its programmable architecture. The CYBLE-222005-00 includes a royalty-free BLE stack compatible with Bluetooth 4.1 and provides up to 16 GPIOs in a small 10 × 10 × 1.80 mm package.

The CYBLE-222005-00 is a complete solution and an ideal fit for applications requiring BLE wireless connectivity.

Module Description

- Module size: 10.0 mm ×10.0 mm × 1.80 mm (with shield)
- Drop-in compatible with CYBLE-022001-00 and includes additional VREF input
- 256-KB flash memory, 32-KB SRAM memory
- Up to 16 GPIOs configurable as open drain high/low, pull-up/pull-down, HI-Z analog, HI-Z digital, or strong output
- Bluetooth 4.1 qualified single-mode module
  - QDID: 79920
  - Declaration ID: D029884
- Certified to FCC, ISED, MIC, KC, and CE regulations
  - FCC ID: WAP2005
  - IC ID: 7922A-2005
  - MIC ID: 203-JN0495
  - KC ID: MSIP-CRM-Cyp-2005
- Industrial temperature range: –40 °C to +85 °C
- 32-bit processor (0.9 DMIPS/MHz) with single-cycle 32-bit multiply, operating at up to 48 MHz
- Watchdog timer with dedicated internal low-speed oscillator (ILO)
- Two-pin SWD for programming

Power Consumption

- TX output power: –18 dbm to +3 dbm
- Received signal strength indicator (RSSI) with 1-dB resolution
- TX current consumption of 15.6 mA (radio only, 0 dbm)
- RX current consumption of 16.4 mA (radio only)
- Low power mode support
  - Deep Sleep: 1.3 µA with watch crystal oscillator (WCO) on
  - Hibernate: 150 nA with SRAM retention
  - Stop: 60 nA with XRES wakeup

Functional Capabilities

- Up to 15 capacitive sensors for buttons or sliders with best-in-class signal-to-noise ration (SNR) and liquid tolerance
- 12-bit, 1-Msps SAR ADC with internal reference, sample-and-hold (S/H), and channel sequencer
- Two serial communication blocks (SCBs) supporting I²C (master/slave), SPI (master/slave), or UART
- Four dedicated 16-bit timer, counter, or PWM blocks (TCPWMs)
- Programmable low voltage detect (LVD) from 1.8 V to 4.5 V
- I²S master interface
- Bluetooth Low Energy protocol stack supporting generic access profile (GAP) Central, Peripheral, Observer, or Broadcaster roles
- Switches between Central and Peripheral roles on-the-go
- Standard Bluetooth Low Energy profiles and services for interoperability
- Custom profile and service for specific use cases

Benefits

The CYBLE-222005-00 module is provided as a turnkey solution, including all necessary hardware required to use BLE communication standards.

- Proven, qualified, and certified hardware design ready to use
- Small footprint (10 × 10 mm × 1.80 mm), perfect for space constrained applications
- Reprogrammable architecture
- Fully certified module eliminates the time needed for design, development and certification processes
- Bluetooth SIG qualified with QDID and Declaration ID
- Flexible communication protocol support
- PSoC Creator™ provides an easy-to-use integrated design environment (IDE) to configure, develop, program, and test a BLE application
More Information

Cypress provides a wealth of data at www.cypress.com to help you to select the right module for your design, and to help you to quickly and effectively integrate the module into your design.

- Overview: EZ-BLE Module Portfolio, Module Roadmap
- PSoC 4 BLE Silicon Datasheet
- Application notes: Cypress offers a number of BLE application notes covering a broad range of topics, from basic to advanced level. Recommended application notes for getting started with EZ-BLE modules are:

Two Easy-To-Use Design Environments to Get You Started Quickly

PSoC® Creator™ Integrated Design Environment (IDE)

PSoC Creator is an Integrated Design Environment (IDE) that enables concurrent hardware and firmware editing, compiling and debugging of PSoC 3, PSoC 4, PSoC 5LP, PSoC 4 BLE, and EZ-BLE module systems with no code size limitations. PSoC peripherals are designed using schematic capture and simple graphical user interface (GUI) with over 120 pre-verified, production-ready PSoC Components™.

PSoC Components are analog and digital “virtual chips,” represented by an icon that users can drag-and-drop into a design and configure to suit a broad array of application requirements.

Bluetooth Low Energy Component

The Bluetooth Low Energy Component inside PSoC Creator provides a comprehensive GUI-based configuration window that lets you quickly design BLE applications. The Component incorporates a Bluetooth Core Specification v4.1 compliant BLE protocol stack and provides API functions to enable user applications to interface with the underlying Bluetooth Low Energy Sub-System (BLESS) hardware via the stack.

EZ-Serial™ BLE Firmware Platform

The EZ-Serial Firmware Platform provides a simple way to access the most common hardware and communication features needed in BLE applications. EZ-Serial implements an intuitive API protocol over the UART interface and exposes various status and control signals through the module’s GPIOs, making it easy to add BLE functionality quickly to existing designs.

Use a simple serial terminal and evaluation kit to begin development without requiring an IDE. Refer to the EZ-Serial webpage for User Manuals and instructions for getting started as well as detailed reference materials.

EZ-BLE modules are pre-flashed with the EZ-Serial Firmware Platform. If you do not have EZ-Serial pre-loaded on your module, you can download each EZ-BLE module’s firmware images on the EZ-Serial webpage.

Not Recommended for New Designs
Overview

Module Description
The CYBLE-222005-00 module is a complete module designed to be soldered to the applications main board.

Module Dimensions and Drawing
Cypress reserves the right to select components (including the appropriate BLE device) from various vendors to achieve the BLE module functionality. Such selections will still guarantee that all height restrictions of the component area are maintained. Designs should be held within the physical dimensions shown in the mechanical drawings in Figure 1. All dimensions are in millimeters (mm).

See Figure 1 on page 5 for the mechanical reference drawing for CYBLE-222005-00.
Figure 1. Module Mechanical Drawing

Note
1. No metal should be located beneath or above the antenna area. Only bare PCB material should be located beneath the antenna area. For more information on recommended host PCB layout, see "Recommended Host PCB Layout" on page 7.
Pad Connection Interface

As shown in the bottom view of Figure 1 on page 5, the CYBLE-222005-00 connects to the host board via solder pads on the back of the module. Table 2 and Figure 2 detail the solder pad length, width, and pitch dimensions of the CYBLE-222005-00 module.

Figure 2. Solder Pad Dimensions (Seen from Bottom)

To maximize RF performance, the host layout should follow these recommendations:
1. The ideal placement of the Cypress BLE module is in a corner of the host board with the chip antenna located at the far corner. This placement minimizes the additional recommended keep out area stated in item 2. Refer to AN96841 for module placement best practices.
2. To maximize RF performance, the area immediately around the Cypress BLE module chip antenna should contain an additional keep out area, where no grounding or signal traces are contained. The keep out area applies to all layers of the host board. The recommended dimensions of the host PCB keep out area are shown in Figure 3 (dimensions are in mm).

Figure 3. Recommended Host PCB Keep Out Area Around the CYBLE-222005-00 Chip Antenna
Recommended Host PCB Layout

Figure 4, Figure 5, Figure 6, and Table 3 provide details that can be used for the recommended host PCB layout pattern for the CYBLE-222005-00. Dimensions are in millimeters unless otherwise noted. Pad length of 0.91 mm (0.455 mm from center of the pad on either side) shown in Figure 6 is the minimum recommended host pad length. The host PCB layout pattern can be completed using either Figure 4, Figure 5, or Figure 6. It is not necessary to use all figures to complete the host PCB layout pattern.

Figure 4. Host Layout Pattern for CYBLE-222005-00

## Digital and Analog Capabilities and Connections

Table 4 details the solder pad connection definitions and available functions for each connection pad. Table 4 lists the solder pads on CYBLE-222005-00, the BLE device port-pin, and denotes whether the function shown is available for each solder pad. Each connection is configurable for a single option shown with a ✓.

### Notes

2. TCPWM stands for timer, counter, and PWM. If supported, the pad can be configured to any of these peripheral functions.

3. TCPWM connections on ports 0, 1, 2, and 3 can be routed through the Digital Signal Interconnect (DSI) to any of the TCPWM blocks and can be either positive or negative polarity. TCPWM connections on ports 4 and 5 are direct and can only be used with the specified TCPWM block and polarity specified above.

4. The main board needs to connect both GND connections (Pad 1 and Pad 10) on the module to the common ground of the system.

5. When using the capacitive sensing functionality, Pad 2 (P4.1) can be connected to a CTank capacitor (located off of Cypress BLE Module). CTank should be used if implementing a shield layer on the capacitive sensor. If used, this capacitor should be placed as close to the module as possible.

6. Analog block functionality is augmented for the user with the external VREF input. The internal bandgap may be bypassed with a 1-µF to 10-µF capacitor.

7. When using the capacitive sensing functionality, Pad 22 (P4.0) must be connected to a CMOD capacitor (located off of Cypress BLE Module). The value of this capacitor is 2.2 nF and should be placed as close to the module as possible.

8. If the I²S feature is used in the design, the I²S pins shall be dynamically routed to the appropriate available GPIO by PSoC Creator.
Power Supply Connections and Recommended External Components

Power Connections

The CYBLE-222005-00 contains two power supply connections, VDD and VDDR. The VDD connection supplies power for both digital and analog device operation. The VDDR connection supplies power for the device radio.

VDD accepts a supply range of 1.71 V to 5.5 V. VDDR accepts a supply range of 1.9 V to 5.5 V. These specifications can be found in Table 9. The maximum power supply ripple for both power connections on the module is 100 mV, as shown in Table 7.

The power supply ramp rate of VDD must be equal to or greater than that of VDDR.

Connection Options

Two connection options are available for any application:

1. Single supply: Connect VDD and VDDR to the same supply.
2. Independent supply: Power VDD and VDDR separately.

External Component Recommendation

In either connection scenario, it is recommended to place an external ferrite bead between the supply and the module connection. The ferrite bead should be positioned as close as possible to the module pin connection.

Figure 7 details the recommended host schematic options for a single supply scenario. The use of one or two ferrite beads will depend on the specific application and configuration of the CYBLE-222005-00.

Figure 8 details the recommended host schematic for an independent supply scenario.

The recommended ferrite bead value is 330 Ω, 100 MHz. (Murata BLM21PG331SN1D).

**Note**

10. A maximum of six single-ended ADC Channels can be accomplished only if the AMUX Buses are not being used for other functionality (such as CapSense).

If the AMUX Buses are being used for other functionality, then the maximum number of single-ended ADC channels is four. Similarly, if the AMUX Buses are being used for other functionality, then the maximum number of differential ADC channels is two.

**Note**

11. It can take as much as 20 ms to write to flash. During this time, the device should not be reset, or flash operations will be interrupted and cannot be relied on to have completed. Reset sources include the XRES pin, software resets, CPU lockup states and privilege violations, improper power supply levels, and watchdogs. Make certain that these are not inadvertently activated.

Environmental Specifications

Environmental Compliance
This Cypress BLE module is built in compliance with the Restriction of Hazardous Substances (RoHS) and Halogen Free (HF) directives. The Cypress module and components used to produce this module are RoHS and HF compliant.

RF Certification
The CYBLE-222005-00 module is certified under the following RF certification standards:
- FCC: WAP2005
- CE
- IC: 7922A-2005
- MIC: 203-JN0495
- KC: MSIP-CRM-Cyp-2005

Safety Certification
The CYBLE-222005-00 module complies with the following regulations:
- Underwriters Laboratories, Inc. (UL) - Filing E331901
- CSA
- TUV

Environmental Conditions
Table 50 describes the operating and storage conditions for the Cypress BLE module.

Table 50. Environmental Conditions for CYBLE-222005-00

</tr>
</tbody>
</table>

ESD and EMI Protection
Exposed components require special attention to ESD and electromagnetic interference (EMI).

A grounded conductive layer inside the device enclosure is suggested for EMI and ESD performance. Any openings in the enclosure near the module should be surrounded by a grounded conductive layer to provide ESD protection and a low-impedance path to ground.

Device Handling: Proper ESD protocol must be followed in manufacturing to ensure component reliability.

Note
12. This does not apply to the RF pins (ANT, XTALI, and XTALO). RF pins (ANT, XTALI, and XTALO) are tested for 500-V HBM.
Regulatory Information

FCC

FCC NOTICE:
The device CYBLE-222005-00, including the antenna 2450AT18B100 from Johanson Technology, complies with Part 15 of the FCC Rules. The device meets the requirements for modular transmitter approval as detailed in FCC public Notice DA00-1407. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

CAUTION:
The FCC requires the user to be notified that any changes or modifications made to this device that are not expressly approved by Cypress Semiconductor may void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment on and off, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help

LABELING REQUIREMENTS:
The Original Equipment Manufacturer (OEM) must ensure that FCC labelling requirements are met. This includes a clearly visible label on the outside of the OEM enclosure specifying the appropriate Cypress Semiconductor FCC identifier for this product as well as the FCC Notice above. The FCC identifier is FCC ID: WAP2005.

In any case the end product must be labeled exterior with "Contains FCC ID: WAP2005"

ANTENNA WARNING:
This device is tested with a standard SMA connector and with the antennas listed below. When integrated in the OEMs product, these fixed antennas require installation preventing end-users from replacing them with non-approved antennas. Any antenna not in the following table must be tested to comply with FCC Section 15.203 for unique antenna connectors and Section 15.247 for emissions.

RF EXPOSURE:
To comply with FCC RF Exposure requirements, the Original Equipment Manufacturer (OEM) must ensure to install the approved antenna in the previous.

The preceding statement must be included as a CAUTION statement in manuals, for products operating with the approved antennas in Table 6 on page 12, to alert users on FCC RF Exposure compliance. Any notification to the end user of installation or removal instructions about the integrated radio module is not allowed.

The radiated output power of CYBLE-222005-00 with the chip antenna mounted (FCC ID: WAP2005) is far below the FCC radio frequency exposure limits. Nevertheless, use CYBLE-222005-00 in such a manner that minimizes the potential for human contact during normal operation.

End users may not be provided with the module installation instructions. OEM integrators and end users must be provided with transmitter operating conditions for satisfying RF exposure compliance.
ISED
Innovation, Science and Economic Development Canada (ISED) Certification

CYBLE-222005-00 is licensed to meet the regulatory requirements of Innovation, Science and Economic Development Canada (ISED).

License: IC: 7922A-2005

Manufacturers of mobile, fixed or portable devices incorporating this module are advised to clarify any regulatory questions and ensure compliance for SAR and/or RF exposure limits. Users can obtain Canadian information on RF exposure and compliance from www.ic.gc.ca.

This device has been designed to operate with the antennas listed in Table 6 on page 12, having a maximum gain of 0.5 dBi. Antennas not included in this list or having a gain greater than 0.5 dBi are strictly prohibited for use with this device. The required antenna impedance is 50 ohms. The antenna used for this transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

ISED NOTICE:
The device CYBLE-222005-00 including the antenna 2450AT18B100 from Johanson technology, complies with Canada RSS-GEN Rules. The device meets the requirements for modular transmitter approval as detailed in RSS-GEN. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

ISED RADIATION EXPOSURE STATEMENT FOR CANADA

This device complies with Innovation, Science and Economic Development (ISED) Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

LABELING REQUIREMENTS:
The Original Equipment Manufacturer (OEM) must ensure that ISED labelling requirements are met. This includes a clearly visible label on the outside of the OEM enclosure specifying the appropriate Cypress Semiconductor IC identifier for this product as well as the ISED Notice above. The IC identifier is 7922A-2005. In any case, the end product must be labeled in its exterior with "Contains IC: 7922A-2005".

European R&TTE Declaration of Conformity

Hereby, Cypress Semiconductor declares that the Bluetooth module CYBLE-222005-00 complies with the essential requirements and other relevant provisions of Directive 1999/5/EC. As a result of the conformity assessment procedure described in Annex III of the Directive 1999/5/EC, the end-customer equipment should be labeled as follows:

All versions of the CYBLE-222005-00 in the specified reference design can be used in the following countries: Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, The Netherlands, the United Kingdom, Switzerland, and Norway.
MIC Japan
CYBLE-222005-00 is certified as a module with type certification number 203-JN0495. End products that integrate CYBLE-222005-00 do not need additional MIC Japan certification for the end product. End product can display the certification label of the embedded module.

Model Name: EZ-BLE PRoC Module
Part Number: CYBLE-222005-00
Manufactured by Cypress Semiconductor.

KC Korea
CYBLE-222005-00 is certified for use in Korea with certificate number MSIP-CRM-Cyp-2005.

한국 인증 세부정보:

1. 제품명(모델명): 특장분출러무선기기(무선데이터통신시스템용무선기기), CYBLE-222005-00
2. 인증번호: MSIP-CRM-Cyp-2005
3. 라이선스 소유자: Cypress Semiconductor Corporation
4. 제조일자: 2015.10
5. 제조업체/국가명: Cypress Semiconductor Corporation/중국

해당 무선설비는 전파혼신 가능성이 있으므로 인명안전과 관련된 서비스는 할 수 없습니다.

The CYBLE-222005-00 is offered in tape and reel packaging. The CYBLE-222005-00 ships with a maximum of 500 units/reel.

Part Numbering Convention

The part numbers are of the form CYBLE-FATT##-SB where the fields are defined as follows.

- **CYBLE**: Device Identification Number: Unique sequential product number for each module
- **F** = EZ-BLE Module Type: 2/4 = PSoC4, 3 = WICED, 4 = PSoC6
- **A** = Antenna Type: 0 = No Antenna, 1 = PCB Antenna, 2 = Chip Antenna
- **T** = Flash Size: 0 = 128KB, 2 = 256KB
- **# #**: Temperature Range: 0 = Industrial, 1 = Extended Industrial
- **S**: Marketing Code: BLE = BLE Product Family
- **B**: Company ID: CY = Cypress

<td>Preliminary datasheet for CYBLE-222005-00 module.</td>
</tr>
</tbody>
</table>
| *A      | 5060713 | 01/07/2016      | Updated **General Description** to add reference and link to PSoC BLE silicon datasheet and include Declaration ID number.  
Updated **More Information** section to the datasheet.  
Updated **Figure 1, Figure 2, Figure 3, and Figure 4** to improve clarity and viewing.  
Added **Figure 5 in Recommended Host PCB Layout** section to show solder pad location from module origin.  
Updated **Table 3 and Figure 6 in Recommended Host PCB Layout** section to provide the location to the center of each solder pad from the origin (in mm and mils).  
Added **BLE Subsystem** section.  
Added French translation for **IC Radiation Exposure Statement For Canada in ISED** section on page 30 in accordance with IC requirements.  
Updated **MIC Japan** section on page 31 to specify final MIC certification number.  
Updated **KC Korea** section on page 31 to specify final KC certification number.  
Added **Table 51 and Table 52** on page 32. |
| *B      | 5146846 | 02/22/2016      | Changed status from "Preliminary" to "Final".  
Updated **More Information** section to add KBA210574 (Certification Test Reports) to reference list.  
Updated **General Description** to include reference and link for QDID.  
Updated orientation of module drawings in **Figure 1 through Figure 9 and Figure 13** to match orientation in PSoC Creator.  
Updated **Table 4** to add additional information with respect to the functional capabilities for each solder pad. |
| *C      | 5421877 | 09/01/2016      | Updated **More Information:**  
Added additional Knowledge Base Article references.  
Updated **Electrical Specification:**  
Updated **System Resources:**  
Updated **Internal Low-Speed Oscillator:**  
Updated **Table 48** (Updated details in “Value” column corresponding to ECO\textsubscript{TRIM} parameter).  
Updated **Ordering Information:**  
No change in part numbers.  
Added **Table 54** (To specify minimum and maximum reel quantities that ship for orders of the CYBLE-222005-00 module).  
Updated to new template.  
Completing Sunset Review. |
| *D      | 5528433 | 11/23/2016      | Updated **More Information:**  
Added **EZ-Serial™ BLE Firmware Platform** section.  
Updated **Recommended Host PCB Layout:**  
Updated **Figure 4, Figure 5, and Figure 6 captions** to specify that these as “Seen on Host PCB”.  
Updated **Power Supply Connections and Recommended External Components:**  
Updated **Figure 7 and Figure 8** to specify that these are “Seen from Bottom”.  
Updated **Digital and Analog Capabilities and Connections:**  
Updated **Table 4:**  
Updated TCPWM column to add TCPWM capability on Port 2 pins.  
Added Footnote 3.  
Updated **Document History Page:**  
Remove ",," from Document Title.
